"Lid Opening/Closing Structure of a Glove Compartment" (for an automobile)

An opening/closing structure for a door of a glove compartment (lid) installed in an instrument panel of a car is disclosed.

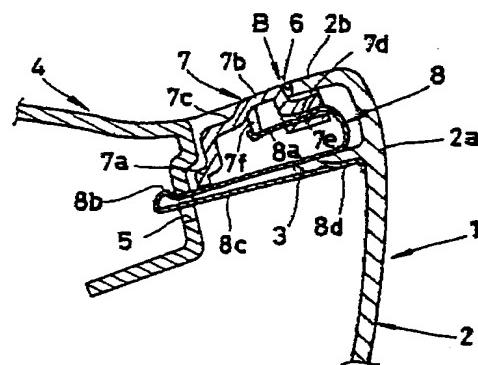

An engaging part 8C is mounted onto an upper part of the lid 2 of the glove compartment 1.

The engaging part 8C includes a claw member 8b consisting of a leaf spring. A pushing part 7a provided on a cutaway portion 6 at a sealing pushes down the engaging part 8C to release engagement.
